

# Project Overview

## Page : About Us/Home

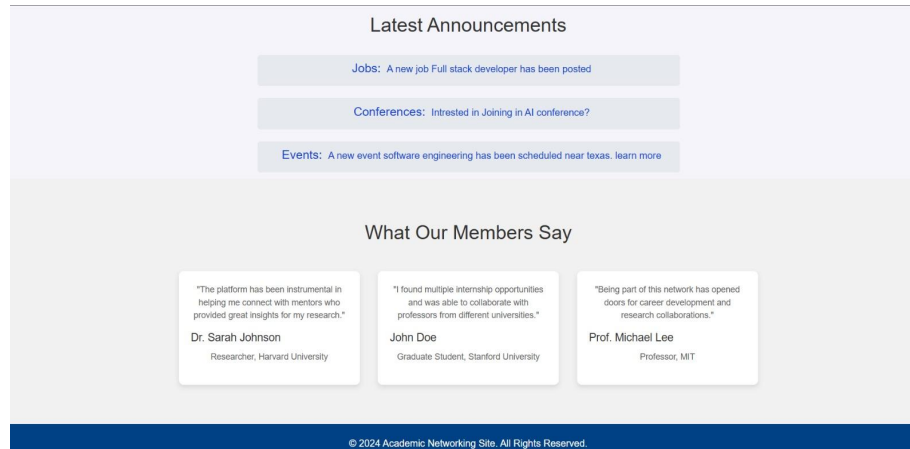

- Gives information of our application.
- Informs the user what we offer.
- People can reach us out via contact us page

## Page : About Us/Home/Login/Signup

The Home page serves as the gateway to the user by Displaying information about our sessions such as conference, announcements, and Quick links for calls.

- Welcome message creates a positive first impression after the user registers.
- Conference gives a quick understanding of the seminar, date, speakers and venue.
- Quick links enhances user experience by providing direct access
- Announcements keeps attendees informed about important updates

# Page : Call for Papers

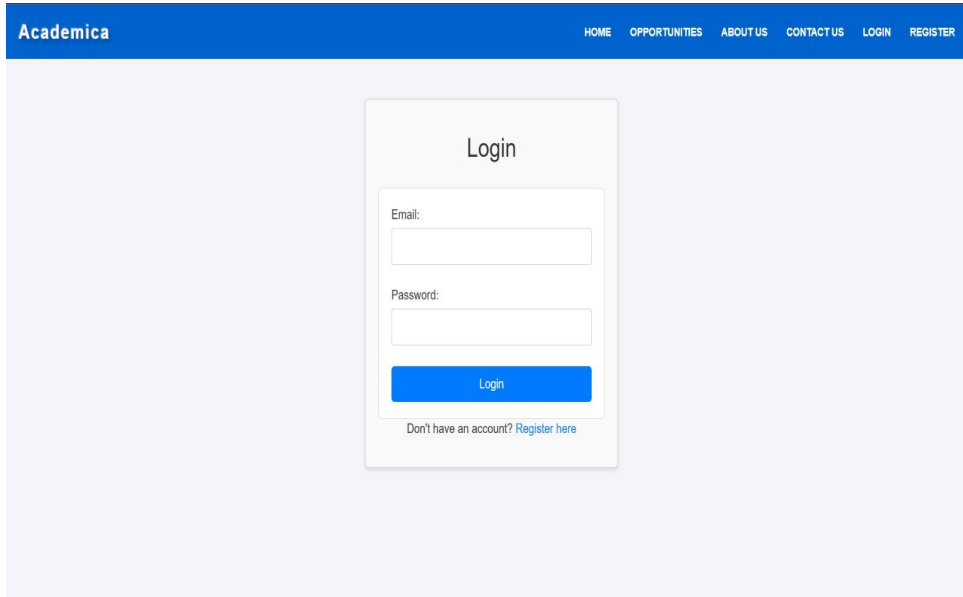

The image shows a web application interface. In the background, there is a 'Call for Papers' banner with the text 'Submit your papers to contribute to our...' and a blue 'Submit a Paper' button. Overlaid on this is a white modal window titled 'Submit Your Paper'. The modal contains three sections: 'Title' with a text input field labeled 'Enter paper title'; 'Abstract' with a larger text area labeled 'Enter paper abstract'; and 'Upload Paper' with a file selection button labeled 'Choose File' and the text 'No file chosen'. At the bottom of the modal is a large blue 'Submit' button.

```
// Handle form submission
const handleSubmit = async (e) => {
  e.preventDefault();
  const formData = new FormData();
  formData.append("title", title);
  formData.append("abstract", abstract);
  formData.append("file", file);

  try {
    const response = await axios.post("http://localhost:3000/api/submitPaper", formData, {
      headers: { "Content-Type": "multipart/form-data", Authorization: `Bearer ${localStorage.getItem("token")}` },
    });
    alert(response.data.message);
    setSubmissions((prev) => [...prev, response.data.submission]); // Add new submission to state
    setShowModal(false); // Close modal
    setTitle("");
    setAbstract("");
    setFile(null); // Reset form
  } catch (err) {
    alert("Error submitting paper");
  }
};
```

- It helps the students to submit their research paper

## Page : Login Page

The screenshot shows the 'Academia' website's login page. At the top is a blue navigation bar with the site name 'Academia' on the left and links for 'HOME', 'OPPORTUNITIES', 'ABOUT US', 'CONTACT US', 'LOGIN', and 'REGISTER' on the right. The main content area has a light purple background. In the center is a white login form with a blue border. The form is titled 'Login' and contains two input fields: 'Email:' and 'Password:'. Below these fields is a blue 'Login' button. At the bottom of the form, there is a link that says 'Don't have an account? Register here'.

```
/**
 * Login api
 *
 * @return \Illuminate\Http\Response
 */
public function login(Request $request)
{
    if (Auth::attempt(['email' => $request->email, 'password' => $request->password])) {
        $user = Auth::user();

        if (!$user->hasVerifiedEmail() && $user->is_email_verified != 0) {
            Auth::logout();
            return $this->sendError('Email not verified. Please verify your email before logging in.', [], 403);
        }

        $accessToken = $user->createToken('VolunteerApp')->accessToken;
        $success['token'] = $accessToken;
        $success['first_name'] = $user->first_name;
        $success['last_name'] = $user->last_name;
        $success['user_type'] = $user->user_type;
        $success['user_id'] = $user->id;
        $success['is_certified'] = $user->is_certified;
        $success['certified_by'] = $user->certified_by;
        return $this->sendResponse($success, 'User login successfully.');
```

- We are authenticating users using their email Id used during registration and the password provided by them. We are encrypting the passwords using bcrypt.

# Page : Register Page

**Register**

First Name:

Last Name:

Email:

Phone Number:

Gender:

Bio:

Password:

Confirm Password:

[Already have an account? Login here](#)

```
// Function to calculate password strength
const evaluatePasswordStrength = (password) => {
  let strength = "";
  const regexes = [
    /[a-z]/, // Lowercase letters
    /[A-Z]/, // Uppercase letters
    /[0-9]/, // Numbers
    /[!@-zA-Z0-9]/, // Special characters
  ];

  const matches = regexes.reduce(
    (count, regex) => (regex.test(password) ? count + 1 : count),
    0
  );

  if (password.length >= 8 && matches === 4) {
    strength = "Strong";
  } else if (password.length >= 6 && matches >= 2) {
    strength = "Moderate";
  } else {
    strength = "Weak";
  }

  return strength;
};
```

- For register page we are taking information from the user such as their name, email ID, password, etc. For password we are ensuring it is secure and only registering if it follows the password requirements.

# SEMINAR Demo

## Challenges

### Challenges and Solutions

#### 1. Integration Challenge:

Ensuring smooth interaction between the React frontend and Next.js backend.

We solved by using Next.js API routes to handle backend logic and expose endpoints for conference details, user profiles, and job postings. Dynamic Data Fetching: Implement fetch or Axios in React to call these endpoints.

#### 2. SMTP Connection:

Setting up SMTP servers correctly and ensuring mails didn't end up going to spam mail

We solved this by setting up an App password for the email account, since google's security policy requires us to set up this policy due to security reasons

# SEMINAR Demo

## Future Scope

### Future Scope:

- **Involving Artificial Intelligence for Networking:** Use AI to recommend connections or discussion groups based on their interests.
- **Integration with External Platforms:** Enabling integration with LinkedIn and other academic platforms such as ResearchGate.
- **Private chatting:** We can also extend the chat feature to allow private messaging within groups as well.
- **Personalized Content:** Use analytics to suggest career tips and resources based on the user's profile

# SEMINAR Demo

## Future Addition to your Portfolio

It improves our portfolio by displaying a diverse set of talents in several disciplines, involving web development, user engagement, and real-time communication. The project includes a variety of vital aspects, including networking through interest-based groups, professional development resources, academic event management, and a mentorship program. Moreover, the chat component demonstrates expertise in real-time communication systems, which is critical for interactive platforms. This project highlights our technical expertise, problem-solving abilities, and capacity to create user-centric applications, making our portfolio stand out to potential employers.
